INTRODUCTION

Ergonomics is the science of arranging or designing things for efficient use. Ergonomics is also called Human Factors Engineering. It involves making the workplace fit the needs of workers. It does not try to make workers adjust to the workplace. When a workplace is designed properly, the worker feels comfortable. Quality and production increase. Everyone benefits.

NATURE OF THE HAZARD

Welding introduces many ergonomic challenges. These challenges are starting to be recognized and addressed. Welding often requires awkward body positions. Body position and time are key factors in causing injuries.

OBJECTIVES OF ERGONOMICS

- Reduce injuries and disorders
- Ensure worker safety
- Ensure worker health
- Ensure worker productivity
- Reduce compensation costs
- Reduce absenteeism
- Comply with regulations

PROBLEMS FROM POOR ERGONOMICS

- Musculoskeletal Disorders (MSDs)
- Repetitive Motion Injury
- Lower productivity
- Lower quality
- Worker dissatisfaction
- Increased absenteeism
- Increased compensation costs
- Increased turnover rate
- Decreased compliance with regulations
- Increased insurance costs

CAUSES OF THE PROBLEMS

- Reaching
- Bending
- Heavy lifting
- Using continuous force
- Working with vibrating equipment
- Repetitive motions
- Awkward postures
- Temperature

SYMPTOMS OF MSDs

- Less gripping strength
- Less range of motion
- Loss of muscle function
- Painful joints
- Pain, tingling, or numbness
- Shooting or stabbing pains
- Swelling or inflammation
- Stiffness or burning sensation

POSSIBLE SOLUTIONS TO PROBLEMS

- Recognize that often Repetitive Motion Injury is mistakenly felt to be a type of short-term weakness or fatigue. Actually it is the start of potentially more serious injuries.
- Address complaints in a timely manner.
- Get employee input.
- Interact with the worker. Discuss possible solutions. Give the employee ownership of any new plans. Promote employee acceptance of solutions.
- Redesign the workstation with the employees’ help. Employees should feel part of the process.
- Utilize gravity when it can help move material to the work area or station. This helps to prevent unnecessary material handling.

PRACTICAL SOLUTIONS—HOW TO AVOID THE HAZARDS

- Avoid fixed work positions. They reduce the blood supply to muscles.
- Keep elbows close to the body.
- Avoid positions where arms are raised above shoulder level.
- Use lighter hand tools.
- Suspend tools.
- Support your elbows.
- Provide sufficient rest.
- Utilize jigs and fixtures.

WORKSTATION DESIGN FACTORS

- Position of the work
- Physical ability of the worker
- Design and weight of the tools
- Body mechanics of the operation
- Type of protective equipment used
- Workspace / environment (size, lighting, temperature, noise, vibration, etc.)
- Physical requirements of the job (lifting, turning, reaching, etc.)
- Mental requirements (motivation, alertness, concentration)
- Strength and size of the workers

SUMMARY

Consider ergonomic solutions for all welding situations. Many can be improved. Evaluate and apply ergonomic principles. Use suggested PRACTICAL SOLUTIONS to avoid the hazards.
