WRC Bulletin 363 May 1991

Recommended Practices in Elevated-Temperature Design: A Compendium of Breeder Reactor Experiences (1970-1987), Volume II—Preliminary Design and Simplified Methods

Edited by A. K. Dhalla

The recommended practices for elevated-temperature design of liquid metal fast breeder reactors (LMFBR) have been consolidated into four volumes to be published in four individual WRC bulletins.

Volume I: Current Status and Future Directions (WRC Bulletin 362)

Volume II: Preliminary Design and Simplified Methods (WRC Bulletin 363)

Volume III: Inelastic Analysis (WRC Bulletin 365)

Volume IV: Special Topics (WRC Bulletin 366)

In Volume II, preliminary design procedures are described that provided practical design and analysis guidelines for specific structural design problems encountered in the past. Also included is a detailed discussion of simplified methods to support both preliminary and final design evaluations.

Publication of this bulletin was sponsored by the Committee on Elevated Temperature Design of the Pressure Vessel Research Council. The price of WRC Bulletin 363 is \$40.00 per copy, plus \$5.00 for U.S. and \$10.00 for overseas, postage and handling. Orders should be sent with payment to the Welding Research Council, Room 1301, 345 E. 47th St., New York, NY 10017.
